Denise & Alex's App Project

App Function: Create & launch an app for adults that supports practice of speech phonemes with real feedback, as well as opportunities for home practice.
An articulation application aimed for adults that has…
- Age-appropriate word targets
- Aesthetically geared for adults
- Features of playing back the user's speech/productions
    - POSSIBLY (hopefully) "scoring" the production as correct or incorrect

Action Item: Provide a list of sections that are going to be displayed when the user picks a sound target.

A. Isolation
B. Syllables
    a. Initial or Final Position
C. Words
    a. Initial, Medial, Final Position
D. Phrases
    a. Initial, Medial, Final Position
    b. Target word order (first, second, third)
        i. Meaning: If the target sound is /g/ in the medial position, and a target word meeting that criterion is "hugging," the target word order in a phrase would differ by:
            1. First: Hugging me.
            2. Second: They're hugging me.
            3. Third: We are hugging.
E. Sentences
    a. Initial, Medial, Final Position
    b. Target word order (first, second, third)
        i. More general than "phrases target word order;" because, if the client is at this level, he/she is likely demonstrating more articulatory control. I don't think this needs to be as distinctively presented.
F. Short Stories
G. Conversation
    a. With conversational topics & open-ended questions to be answered

Notes from 11/11/2022
Target Market:
- Adults receiving articulation (speech therapy)
    - Possibly also middle, high school students receiving speech therapy

- Speech-Language Pathologists
    - To be used as a tool for facilitating home practice, or even support during sessions

Desired Components:
- Organized phonemes (speech sounds) at varying levels of production
    - Isolation, Syllable, CVC word, CVCV/CVCC/CCVC/etc. words, phrases, simple sentences, sentences, reading, conversational speech
    - *Words in the app would be adult-oriented
    - *Perhaps even add more colloquial language to make it more fun, engaging (based on maturity levels, appropriateness)

Initial Pages:

- Set up a user/role: student or SLP (perhaps different labels decided upon)
-

Example of Layout

Page Sequencing:	Button(s):	Function(s):	Notes:
A. Choose a sound (phoneme) B. Choose a level (isolation, syllable, CVC, etc.) C. If applicable, choose a position (initial, medial, final)	Word lists: i.e., if the target is production of /k/ in the initial position of single words (CVC)... Cup Core Kid Cone Call	● Target is presented visually ● There is an option to hear it auditorily ●
